

AtlasBlue® 'FCM12-045'

AtlasBlue® 'FCM12-045' was released for its vigorous growth habit, exceptional yields, and high-quality fruit. Selected for its performance in no chill production systems, it ripens in the same time frame as 'Biloxi' and 'Ventura' but has a more concentrated ripening period. If the fruit is allowed to ripen fully, AtlasBlue® 'FCM12-045' develops a very aromatic flavor and in our lab tests the storage life and firmness were impressive. Although self-fertile, cross-pollination is highly recommended to ensure maximum fruit size.

We do not recommend this variety for traditional, semi-deciduous low-chill production systems, and trials are still in progress to determine the commercial viability of AtlasBlue® 'FCM12-045' in low-chill evergreen production systems. This variety has increased water demand and requires proper management of the excessive vegetative growth.

AtlasBlue® 'FCM12-045' is licensed to Fall Creek. The variety information presented in this chart is based on observations and does not guarantee results. Plant performance, fruit quality, and production across global regions, will vary due to a variety of elements including climate, soil, horticultural practices, inherent traits, and other factors. Fall Creek recommends growers trial varieties in their own commercial grower operations.
